

CLOUVENT

BRAND IDENTITY SYSTEM & GUIDELINES

VERSION 1.0 • AUGUST 2026

Editorial craft × digital precision

Brand Foundation

A practical source of truth for how Clouvent should look, sound and behave.

Clouvent is a premium digital presence studio. The business is Australia-first, with an initial focus on photographers and visual/creative businesses, while remaining intentionally capable of expanding beyond that niche over time.

BUILD → MANAGE → GROW

The identity should express a continuous partnership: premium digital experiences are built with care, managed properly, and improved over time. The brand must not resemble a cheap freelance service, a generic SaaS company, or a template-driven digital agency.

BRAND PERSONALITY

- Precise
- Premium
- Editorial
- Intelligent
- Confident
- Human
- Image-first
- Modern but timeless

CREATIVE TERRITORY

EDITORIAL CRAFT × DIGITAL PRECISION

Editorial craft contributes typography, photography, composition and emotional restraint. Digital precision contributes grids, structure, performance, geometric detail and technical credibility.

Positioning & Audience

Primary positioning: Premium Digital Presence Studio.

Initial market	Australia-first
Initial focus	Photographers and visual/creative businesses
Primary conversion	Project enquiry
Service architecture	BUILD → MANAGE → GROW

Clouvent should feel internationally capable through quality, craft and standards, without claiming an international client base or unsupported business outcomes.

CORE VALUE PROPOSITION

A premium website build followed by real ongoing management and growth support — not a one-off freelance handoff.

Logo System

Preserve the current mark; professionalize its applications.

The current logo is the master visual reference. Its geometric network/grid mark and ascending vector communicate digital structure and progress. The identity should be built around it rather than casually redesigning it.

REQUIRED MASTER ASSETS

- Primary horizontal logo
- Black logo for light backgrounds
- White/reversed logo for dark backgrounds
- Brandmark/icon-only asset
- Favicon and social-avatar crops
- SVG master and transparent PNG exports

USAGE PRINCIPLES

- Keep the primary logo predominantly monochrome.
- Use generous clear space around the mark.
- Do not stretch, skew, rotate, add shadows or recolor individual logo parts.
- Do not make copper the default full-logo treatment.
- Use only high-contrast backgrounds that preserve legibility.

Colour System

Black + ivory + restrained copper.

CLOUVENT BLACK #171717 Primary dark surface	GRAPHITE #222120 Elevated dark surface
CLOUD IVORY #F3F0EB Primary light surface	STUDIO WHITE #FAF9F7 Clean neutral surface
CLOUVENT COPPER #C9784E Signature accent / CTA	SOFT COPPER #D99068 Secondary accent
STONE GREY #A7A39E Secondary text	BORDER GREY #353331 Subtle dividers

Usage philosophy: approximately 70% neutral surfaces, 20% photography/content, and 10% accent. This is a directional ratio, not a rigid mathematical rule.

Copper is a signature, not decoration. Use it for calls to action, selected states, editorial numbering, fine rules and deliberate micro-details. Avoid flooding large areas with orange/copper.

Typography

Editorial expression supported by modern functional clarity.

RECOMMENDED DIRECTION

Display / editorial: Instrument Serif — recommended candidate for hero headlines, campaign statements and Selected Work titles.

Functional / UI: Manrope — recommended candidate for navigation, body copy, buttons, forms, metadata and interface text.

Licensing and production availability should be verified before final lock. This document uses metrically compatible local fonts for rendering; the brand recommendation remains Instrument Serif + Manrope.

Display XL	Serif	56–80 px
H1	Serif	44–64 px
H2	Serif / Sans	32–48 px
H3	Sans	24–32 px
Body Large	Sans	18–22 px
Body	Sans	16–18 px
Eyebrow / UI	Sans	12–14 px

Typography should create most of the visual character. Avoid compensating for weak type hierarchy with excessive cards, gradients, effects or decoration.

Graphic Language

Visual motifs should grow from the logo geometry, creating recognition without repeating the logo everywhere.

- Network/grid geometry — thin structural lines and modular alignment.
- Nodes — small connection points used sparingly.
- Direction — controlled ascending lines or vectors representing progress.
- Editorial numbering — 01 BUILD / 02 MANAGE / 03 GROW.
- Fine rules — copper or neutral separators that organize information.

AVOID

- Random blobs and unrelated shapes
- Generic tech waves or neon effects
- AI brains and literal cloud graphics
- Code brackets used as decoration
- Visual clutter that competes with photography

Photography Art Direction

The work should remain the hero.

- Prefer authentic client photography and verified project material.
- Use large editorial crops, full-bleed moments and generous negative space.
- Keep overlays minimal so photography retains tonal detail.
- Use device/site mockups only when they help explain delivered work.
- Plan intentional desktop and mobile crops rather than relying on automatic center-cropping.
- Never present generic stock or AI imagery as client work.

For the primary Once Upon a Time Photography case study, public claims should focus on verified work delivered: design and React + TypeScript development, ongoing maintenance, analytics/Search Console monitoring and paid social support. Do not claim unverified results.

UI & Interaction Language

BUTTONS

Primary: copper signature CTA with strong contrast. Secondary: transparent or neutral treatment with a fine border. Text CTA: concise label with directional arrow where useful.

LAYOUT

Prefer strong typography, spacing, composition and photography over repeated rounded containers. Cards should exist only when they improve information architecture.

SURFACES

Use controlled rhythm between near-black editorial sections and warm ivory/light sections. Avoid excessive gradients and glassmorphism.

MOTION

Motion should communicate calm confidence: restrained text/image reveals, precise hover states, subtle scaling and deliberate transitions. Respect reduced-motion preferences and never trade accessibility for spectacle.

Brand Voice & Messaging

Clouvent should sound concise, confident, premium, human, specific and intelligent. It should explain business value without inflated agency language.

GOOD TERRITORY

- Your work deserves a digital presence to match.
- Built beautifully. Managed properly. Designed to grow.
- BUILD. MANAGE. GROW.

AVOID

Generic statements such as “leading innovative digital solutions company” or “cutting-edge solutions for clients worldwide.”

CLAIMS RULE

Never invent testimonials, metrics, awards, clients, revenue, conversion improvements, traffic improvements, international experience or other unsupported proof.

Tagline Direction

Recommendation: do not lock a permanent tagline yet.

The historical line “Infrastructure With Intelligence Built In.” reflects an earlier infrastructure-heavy positioning and is less aligned with the current premium digital-presence studio direction.

BUILD. MANAGE. GROW.	Strongest brand device	Directly owns the service model; flexible and memorable.
Digital presence, properly built.	Strong candidate	Clear, premium and disciplined; slightly BUILD-weighted.
Built to be seen. Designed to perform.	Campaign line	Balances visibility and performance; less distinctive long-term.
No fixed tagline	Viable	Allows sharper campaign messaging while the brand matures.

Recommended current approach: use BUILD. MANAGE. GROW. as a recurring brand architecture and delay a permanent tagline until the wider identity is tested across website and campaigns.

Social Media System

The first Clouvent Facebook post establishes useful early signals: dark editorial foundation, warm accent, large serif typography, modern sans-serif support, technical line icons and photography/device imagery. Future content should refine these into a repeatable system rather than duplicate one layout.

- Education / practical insights
- Genuine website audits
- Before → after transformations
- Selected Work
- BUILD / MANAGE / GROW explainers
- Performance and UX insights
- Project features
- Verified testimonials only
- Reel/video covers

Goal: a Clouvent post should become recognizable before the viewer reads the logo.

Website Application

The future website should translate the identity into a premium, conversion-focused experience rather than a social-poster aesthetic.

IMPACT → SELECTED WORK → TRUST → SERVICES → ENQUIRY

- Hero: powerful editorial statement + exceptional visual restraint.
- Selected Work: lead with the strongest verified case study.
- Services: one launch page structured around BUILD / MANAGE / GROW.
- About: credibility, approach and human context without inflated claims.
- Contact: project enquiry as the primary conversion; direct email/discovery call as secondary paths.

The launch sitemap remains: Home, Work, Services, About, Contact / Enquiry, Privacy Policy, and Terms if applicable.

Business Collateral

Extend the same system only where it supports real business operations.

- Proposal template
- Quotation / invoice styling
- Email signature
- Presentation deck
- Case-study PDF
- Facebook / LinkedIn covers
- Open Graph / social-share template
- Business card and letterhead only if operationally useful

Every asset should reuse the same logo, palette, type hierarchy, grid logic and voice. Avoid creating collateral solely to make the brand appear larger.

Do / Don't

DO	DON'T
Use generous whitespace and deliberate composition.	Use generic SaaS card grids everywhere.
Let typography and photography carry the identity.	Use excessive gradients, glassmorphism or decorative effects.
Use copper as a restrained signature.	Turn every element orange/copper.
Use verified client material and claims.	Invent metrics, testimonials or social proof.
Design mobile as a first-class experience.	Treat mobile as a reduced desktop afterthought.
Use purposeful, accessible motion.	Add random animation simply because it is possible.

Brand Asset Checklist

- Master logo: SVG
- Transparent PNG: dark and light variants
- Brandmark-only SVG/PNG
- Favicon set
- Social profile avatar
- Colour tokens and accessible combinations
- Licensed production font files / approved web-font source
- Typography scale and responsive rules
- Icon set
- Social post templates
- Proposal / presentation templates
- Open Graph template
- Website design tokens
- Photography usage permissions / source records

STILL NEEDS INPUT

- Clouvent legal entity / business registration details where applicable
- Clouvent base location
- Final domain
- Founding story / approved company bio
- Once Upon a Time Photography niche/style
- Verified testimonial text when obtained

Governance & Versioning

This document is Brand System v1.0. It should evolve deliberately, not through one-off design choices.

- New colours, fonts, icon styles or layout patterns require a clear reason.
- Maintain reusable design tokens for colour, typography, spacing, radius and motion.
- Do not introduce major brand changes in individual marketing pieces without updating the system.
- Keep all public claims traceable to user-provided or verified information.
- Accessibility and performance remain shipping requirements for digital applications.

VERSION 1.0 / AUGUST 2026

Source basis: Clouvent Development Constitution, Clouvent Project Brief, the current Clouvent logo, and the first Clouvent Facebook post. Proposed creative choices in this document are recommendations and should be treated as the v1.0 direction until formally approved.
